Printing

Printing Process

Extreme Canopy offers two printing processes suitable for vibrant full color images. Our Ultraviolet and Screen printing processes have high fade resistance factor and will endure extended time periods in any outdoor environment.

UV Printing

Ultra Violet printers offer cutting edge technology and are perfect for full color digital photographic images, logos or company branding. The Ultraviolet printing process is superior to standard inkjet printers as a UV light follows the printing head and cures the ink. This results in a far more robust substrate and offers long term fade resistance.

Screen Printing

Screen printing process is perfect for simple logos, cafe names or other branding. This process uses a series of screens that apply the ink directly onto the fabric. Each color requires an additional screen to be made. Although screen printing is more suitable for large volume production, it is also ideal for multiple units. The Extreme Canopy graphics team can recommend which process best meets your requirements.

Ground Fixings

Square Base Plate 1/2"

Size - 1'7" (W) x 1'7" (L) x 1/2" (H)
(50cm x 50cm x 1cm)

Weight - 27lbs
(12.5kg)

Sold seperatley, available for all sizes

Square Base Plate 3/4"

Size - 1'7" (W) x 1'7" (L) x 3/4" (H)
(50cm x 50cm x 1.5cm)

Weight - 55lbs
(25kg)

Sold seperatley, available for all sizes

Square Weight Plate

Size - 1'7" (W) x 1'7" (L) x 1.18" (H)
(50cm x 50cm x 3cm)

Weight - 27lbs
(12.5kg)

Sold seperatley, available for all sizes
